## NOTICE OF MOTION

IN THE MATTER OF *The Public Commercial Vehicles Act*, R.S.O. 1970, Chapter 375.

AND IN THE MATTER OF *The Ontario Highway Transport Board Act*, R.S.O. 1970, Chapter 316.

AND IN THE MATTER OF an application by A. Cupido Haulage Limited for an extension to Class 'D' public commercial vehicle operating licence No. 1317 heard by the Ontario Highway Transport Board on Monday, the 10th day of September and on Tuesday, the 12th day of September, 1978, and resulting in an Order of denial dated 28 September, 1978 as issued by the said Board, and received by mail on November 1, 1978.

TAKE NOTICE that pursuant to Section 17 of *The Ontario Highway Transport Board Act*, A. Cupido Haulage Limited intends to move the Ontario Highway Transport Board on a date to be fixed by the Chairman of the said Board for an Order directing a re-hearing by Argument only, before a different Board panel, of the said application in the following terms:

For the carriage of scrap metal to or from:

- (1) the City of Hamilton;
- (2) The Municipality of Metropolitan Toronto

on the following grounds:

The sitting panel erred as follows:

1. The nine shipper witnesses, eight of whose companies operate their own private fleets, testified that the existing available equipment to carry scrap is not sufficient to meet the needs of their companies. The Board concluded therefore that a back-up, or overflow service does not constitute necessity and convenience. The Board rules in effect that the

operators of private fleets are not members of the shipping public.

2. The nine shipper witnesses were high ranking officers of the leading companies within the scrap metal industry. The Board failed to take cognizance of this fleet.

TAKE NOTICE that in respect to this Notice of Motion will be heard argument by the Agent on behalf of the applicant and such further and other material as the Agent may advise and this Honourable Board may permit.

Dated at Toronto, this 3rd day of November, 1978.

E. MAX WALKER,  
Agent,  
225 Watson Avenue,  
Oakville, Ontario.

The Board has fixed Tuesday, the 20th day of February, 1979, at its Chambers, Britannica House, 151 Bloor Street West, 10th Floor, Toronto, Ontario, at 10 a.m. (E.S.T.) for that purpose.

Note

The use of tetracyclines during tooth development (last half of pregnancy, infancy and childhood to the age of 8 years) may cause permanent tooth discoloration (yellow-gray-brown). This reaction is more common during long-term use of the tetracyclines, but has been observed following short-term courses. Enamel hypoplasia has also been reported. Tetracyclines should therefore not be used in this age group unless other antibiotics are not likely to be effective or are contraindicated.

Hypertension: Fixed Combination Drugs

A fixed combination drug is not indicated for initial therapy of hypertension. Hypertension requires therapy titrated to the individual patient. Recognizing this, if the fixed combination drug meets that titrated dose of its individual components, its use may be more convenient in the management of the individual patient. The treatment of hypertension is not static, it must be re-evaluated as conditions in each patient warrant. Adapted from F-D-C Reports, Sept. 11, 1972, p 8 (FDA Cardiovascular Advisory Committee).

**Hypertension: Fixed Combination Drugs**  
A fixed combination drug is not indicated for initial therapy of hypertension. Hypertension requires therapy titrated to the individual patient. Recognizing this, if the fixed combination drug meets that titrated dose of its individual components, its use may be more convenient in the management of the individual patient. The treatment of hypertension is not static, it must be re-evaluated as conditions in each patient warrant. Adapted from F-D-C Reports, Sept. 11, 1972, p.8 (FDA Cardiovascular Advisory Committee).

## ADVISORY COMMITTEE REPORT

It is intended that all provincial fire safety regulations in respect of property and of *buildings* from the day of completion of their construction to the day of completion of demolition be in the Ontario Fire Code and that all provincial acts and regulations in conflict with the Ontario Fire Code legislation and the Ontario Fire Code be amended or deleted to eliminate this conflict.

Certain hazards regulated by this Code are recognized as transcending Municipal boundaries, (e.g. vehicles carrying hazardous liquids, gases and substances) and, therefore, it is recommended that these hazards be under provincial jurisdiction and enforcement and that the areas of provincial enforcement be determined by the province and set out in the Ontario Fire Code Legislation.

As the proposed Fire Code is to be the first comprehensive mandatory document for minimum Fire Safety Standards in Ontario, the Committee found it expedient to use the National Fire Code, 1975 as the logical base on which to build a document appropriate to the needs of the Province of Ontario.

At the present time, in Ontario, there are sixty-three Statutes and Regulations containing Fire Safety and Fire Prevention requirements (see attached partial list). The Committee took into account the possible ramification that the Ontario Fire Code would have in these areas, particularly the major legislation, i.e. Fire Marshal's Act and Gas Handling Act. Another consideration was, of course, the relationship of the Ontario Fire Code to the Ontario Building Code.

It is immediately apparent that the two documents must complement and support each other in the areas of Fire Safety. When using this Fire Code it is important to appreciate both the special relationship which exists between it and the Ontario Building Code with respect to fire safety and the need to consider the contents of both Codes in building design, construction and maintenance. The role of each Code with respect to fire safety should be as follows:

Ontario Building Code (OBC) — should establish the standard of fire safety for the construction of new buildings, the reconstruction of buildings including extensions or material alterations, and the elimination of unsafe conditions in matters not covered by the Fire Code.

The Ontario Fire Code (OFC) is to regulate buildings from the day of completion of construction to the day of completion of demolition with respect to fire matters by establishing

- (a) standards for fire prevention,
- (b) fire fighting and life safety in buildings,
- (c) including but not limited to retrofitting of existing buildings and in relationship to change of occupancy,
- (d) standards for the conduct of activities causing fire hazards,
- (e) maintenance of fire safety equipment and egress facilities,
- (f) standards for portable extinguishers,
- (g) limitations on building contents,
- (h) the establishment of fire safety plans including the organization of supervisory staff for emergency purposes, and
- (i) establish the standard for fire prevention, containment and fighting of fires originating outside buildings which may present a hazard to a community.

The Committee notes that Municipal Fire and Building Officials, generally, have cooperated well in the past in Fire Safety matters, the exception being areas where the lines of jurisdiction were left unclear.

In the Committee's opinion, the best guarantee for efficient cooperation of Fire and Building Officials is to have two distinct and separate documents administered and enforced respectively by Fire and Building Officials. The role of the Building Official in the enforcement of Ontario Fire Code should be enunciated in the legislation specifically relating to structural and non fire related matters.

Where the Fire Code has jurisdiction, any order by the Chief Fire Official or any accepted Life Safety Study shall take precedent over any provisions of The Building Code.

In considering the foregoing, various options were discussed, and in arriving at the subsequent recommendations included in the report, we used the following Terms of Reference and the criteria which evolved from same.

## ii

- I Economics (Provincial and Municipal)
- II Staff and Facilities
- III Technical Advice
- IV Degree of Existing Involvement in Fire Safety

I thank the members for their industry, thoroughness and fine cooperation. I also must thank the Ministry of Consumer and Commercial Relations staff and their many advisors for their cooperation and conscientious dedication.

Chairman,  
Advisory Committee

## SUMMARY OF RECOMMENDATIONS AND ADMINISTRATION ENFORCEMENT

### RECOMMENDATION 1

That the document be called:  
"The Ontario Fire Code."

#### Comments:

It was the logical designation for the public to identify the document which deals with fire matters and to distinguish it from the N.F.C. of Canada.

### RECOMMENDATION 2

That the "Authority having Jurisdiction" at the Municipal level be named: "Chief Fire Official".

#### Comments:

A logical designation for the public to identify and relate to the Fire Code.

**Note:** It is also expected that there will be persons designated as "Inspectors" for advising and enforcing Code requirements.

The Committee studied a proposition advanced, that the various types of Inspections required at the Municipal level could be conducted initially by one central agency. For instance, By-Law Enforcement personnel could conduct cursory routine inspections, using personnel with some training and knowledge in each of several trades and disciplines.

Where more expertise is found to be needed, inspections would be conducted by the appropriate Department.

The proposed system attempts to reduce overlapping requirements and duplication of effort, and in this respect, it merits consideration. A consensus view, held that although the Central Agency system might well work in respect to Zoning, Health, Weed Control and Building requirements, the present volume of Fire inspections could not be maintained by such a system, unless the staff was at least comparable in numbers to existing Fire Department staff currently deployed in Fire Inspections.

The possibility of using Fire Service staff for "Central Agency" inspections, is precluded by the Fire Department Act which restricts Firefighters to Fire Protection duties.

Therefore, for the purpose of Fire Code enforcement, the "Central Agency" proposal was not thought to be workable.

This however should not exclude the appointment of all expertise outlined in the Report of the Advisory Committee that other than the Fire Service in areas of interest as inspectors under the provision of the Fire Code.

**RECOMMENDATION 3**

- (a) "That the enforcement of the Ontario Fire Code be at the Municipal level except that in unorganized territory, the enforcement to be at the Provincial level and except that the Province shall have the right, at its own initiative or on request, to enforce this Code in respect of any property under Municipal jurisdiction in consultation with the subject municipalities." Certain hazards regulated by this Code are recognized as transcending Municipal boundaries, (e.g. vehicles carrying hazardous liquids, gases and substances) and, therefore, it is recommended that these hazards be under provincial jurisdiction and enforcement and that the areas of provincial enforcement be determined by the Province and set out in the Ontario Fire Code Legislation.
- (b) "That the *Fire Services of Ontario* be responsible for the enforcement of the Code at the Municipal level."
- (c) "That provincial inspection activities and resources be assessed, and possibly transferred to a central source to carry out inspection services where it is not available at the Municipal level; and continue with revised duties under the authority of the Ontario Fire Code until municipalities are capable of taking on these revised responsibilities."
- (d) "That the *Office of the Fire Marshal* be given the responsibilities at the Provincial level for administration of the Ontario Fire Code."

**Note:** During the deliberations which led to the foregoing recommendations 4 (a), (b), (c) and (d), the Committee considered the application of various criteria. The final recommendations were deemed most appropriate in terms of:

- I Economics (Provincial and Municipal)
- II Staff and Facilities
- III Technical Advice
- IV Degree of existing involvement with Fire Safety.

and they are as follows . . . .

**I. ECONOMICS**

The Office of the Fire Marshal and the uniformed Fire Service of Ontario already conduct almost a third of a million inspections per year. They are already involved in training civilian, industrial and commercial personnel in firefighting, inspections and testing of fire equipment, and preparing fire emergency plans.

To continue these functions, using a "Uniform Standard", should involve no increased costs to the taxpayers.

The Committee sees no other Departments of Provincial and Municipal Government able to assume these duties and responsibilities without requiring a large increase in staff, facilities and subsequent cost.

Therefore, we believe that the Economics criterion allows no alternatives.

**II. STAFF AND FACILITIES**

The guide to enforcement on Page XIII of the National Fire Code of Canada indicates the enforcement options available. Presently in Ontario there are two levels of enforcement of Fire Code matters at the Provincial and Municipal levels.

Provincial statutes exist as indicated in the Statutes and Regulations respecting Fire Safety and Fire Prevention published by the Ministry of the Solicitor General, Office of the Fire Marshal. These Statutes in many cases delegate responsibilities to an officer authorized to inspect buildings under the Fire Marshal's Act, and these Officers are Municipal Fire Prevention Officers and the Fire Chief under Section 8 (3) of the Fire Marshal's Act.

In the 1973 Handbook of Municipal Fire Protection in Ontario, published by the Ministry of the Solicitor General, it was reported that there are:

- 632 Municipal Fire Departments in Ontario.
- 33 full time Departments

iv

85 composite Departments  
516 part time Departments

and at that time, 468 reported that they provided Fire Prevention inspection services including:  
33 full time Departments  
81 composite Departments  
354 part time Departments

At that time, the Fire Department indicated that 597 staff members were devoted to Fire Prevention on a full time basis and 5,887 were occupied on a part time basis for 6,484 of 21,012 Firefighters engaged in Fire Prevention inspections.

The Annual Report 1976 of the Ministry of the Solicitor General, under the Division of Public Safety, Office of the Fire Marshal, reported that Municipal Fire Prevention inspections conducted at the Municipal level by the Fire Services totalled 271,592 in 1976, with the following breakdown of occupancies:

Assembly	29,306
Institutional	5,958
Residential	137,406
Business and Personal Services	23,718
Mercantile	40,845
Industrial	<u>34,359</u>
TOTAL:	<u>271,592</u>

To insure that the Fire Services in the Province are current in Fire Prevention and Fire Protection practices, the Office of the Fire Marshal conducts training at two levels. A 40 hour Fire Prevention programme is offered on a Regional basis. In 1976 alone, a total of 514 students completed the 40 hour programme.

In addition to the basic 40 hour Fire Prevention programme, a 15 week Fire Protection Technology programme Officer of potential Officer training is offered at the Ontario Fire College in Gravenhurst, and staffed by the Ontario Fire Marshal's Office. The College operated from January 19 to December 10, 1976. The Course offers a total of five weeks training in Fire Prevention.

During the period 1967 to 1976, a total of 600 students completed the Fire Protection Technology Course with 107 completing the programme in 1976 alone.

III. TECHNICAL ADVICE

Technical advice on Fire Codes and Standards is available and currently provided by the Fire Service and to a lesser degree by the private industry.

While it should be noted that the Fire Service has not yet realized its full potential in Fire Prevention, the training of personnel is progressing at a fast rate, and in numbers not available to other Municipal agencies.

The Office of the Ontario Fire Marshal's staff comprised of registered Professional Engineers is available for expert advice on all Fire Protection matters, and include the National Fire Code, which forms a part of the curriculum taught at the Ontario Fire College.

IV. DEGREE OF EXISTING INVOLVEMENT IN FIRE SAFETY

Fire Codes are a traditional and intrinsic part of Fire Services operations. The degree of proper enforcement of Code requirements reacts reciprocally with Firefighting Operations, Investigations and Training Programmes. Fire Departments receive fire safety complaints on a 24 hour per day basis, during which they are required to advise and act on Fire Safety requirements and must have the authority to do so.

At the Municipal level, the Fire service is the only agency which is currently totally involved in Fire Safety matters relative to the Terms of Reference for the proposed Ontario Fire Code, and there are approximately 7,000 Firefighters engaged in Fire Inspections throughout Ontario. The Office of the Fire Marshal has been active in most of the requirements of the National Building Code, and, all of the requirements of the National Fire Code.

The Ontario Fire College is already teaching National Fire Code and Ontario Building Code requirements, and is readily adaptable to train and certify Fire Department personnel in the use of the Ontario Fire Code.

As noted earlier, the Ontario Fire Marshal has other Fire Safety functions which are intrinsically entwined with Fire Code requirements. Any attempt to separate these functions would seem impractical and illogical.

Other Municipal agencies are not generally involved in the Fire Safety of existing buildings, and all Fire Protection has been traditionally, the responsibility of the Fire Service.

In buildings under construction, or 'material' alteration, the Building Code under Section 2.11 outlines the area of responsibility for fire protection equipment and systems which may be enforced by the Fire Chief.

One can readily see that Fire Prevention is a necessary link in the Fire Protection chain and should remain within the purview of the Fire Service.

Therefore, using the criterion of technical advice availability, there appears to be no alternative.

#### **RECOMMENDATION 4**

That the Ontario Fire Code be enacted as a Regulation, under the provisions of Section 26 of The Fire Marshal's Act.

Another option discussed was the establishment of a new Provincial Act, named the Ontario Fire Code Act, which would enable Regulations to be made and would cover all administrative matters dealing with the enforcement of such Regulations.

To accept the Fire Code Act option and continue to recognize Recommendation Number 3 in respect to responsibility for the administration of the Fire Code, would possibly create unnecessary legislative and legal work for the same end result.

The recommended option would allow the enactment of Regulations under existing Provincial Statute, with minor modification to that Statute. An additional advantage to the enactment of the Fire Code, under the Fire Marshal's Act, is that the Ministry responsible and the Fire Marshal, specifically, would be identified in administering the Fire Code.

It may be worth while noting that the Manitoba Fire Code was enacted in a manner similar to the recommendation and became a Regulation under an existing Fire Prevention Act.

#### **RECOMMENDATION 5**

That the Minister send this proposed Ontario Fire Code out to public comment and that the present Executive Committee be reconstituted to review the public comments with view to amend the said Code.

#### **RECOMMENDATION 6**

That the present Subcommittee on Parts 2-6-7 be reconstituted to prepare a "Model Fire Safety Plan for Various Occupancies".

#### **RECOMMENDATION 7**

That provisions shall be made to exempt from liability those involved in the Administration and Enforcement of the proposed Ontario Fire Code while carrying out their duties in good faith.

**PART 4 COMMITTEE REPORT**

**General Comments**

The objective of the Part 4 Sub-committee on Flammable and Combustible Liquids was to review and compare the National Fire Code of Canada with existing provincial legislation respecting storage, handling and use of flammable and combustible liquids and make recommendations on changes where necessary for application in an Ontario Fire Code.

In our review, the committee examined existing legislation to ensure that, where possible, duplication would be eliminated in the proposed Ontario Fire Code. Where changes or modifications to existing articles were made for adoption to an Ontario Fire Code, such action was decided by Provincial needs. Such changes will not result in a reduction in fire safety and fire prevention requirements but enhance what exists by improvement.

### Summary of Significant Changes to Part 4

1. In Subsection 4.1.5., Fire Prevention and Protection, authority having jurisdiction has been replaced by a Chief Fire Official.
2. A general requirement has been provided to prohibit the dispensing of flammable liquids into metal containers that are not electrically connected to a fill stem.
3. Due to an element of danger under certain conditions, the gravity transfer of flammable liquids through a self-closing faucet must now be approved by the Chief Fire Official before it is permitted.
4. Controlled use of moveable storage tanks used to fuel vehicles or other motorized equipment has been incorporated into 4.1.8.4. which is a new requirement under Subsection 4.1.8. General requirement limiting indoor storage of flammable and combustible liquids in containers in industrial occupancies has been changed from the existing three foot height to a maximum of six feet.
5. The requirement in Subsection 4.2.5., Mercantile Occupancies limiting the amount of mercantile storage has been liberalized by adding a fourth sentence that would permit the occupancy to exhibit twice the quantity in sentences two and three providing the occupancy is equipped with approved automatic sprinkler system.
6. In general, requirements for portable fire extinguishers has been re-examined and ratings increased to insure that there is a sufficient supply of extinguishing agent to provide for extra time needed by inexperienced operators. In most cases reference has been made to Part 6 of the Code in lieu of attempting to specify extinguisher requirements in each case.
7. Changes in Subsection 4.3.2., Installation of Outside, Aboveground Storage Tanks has been changed, particularly in the reduction of the minimum distance to five feet when the tank contains only combustible liquid and does not exceed 10,000 gallon storage capacity. Storage tanks exceeding the 150 foot diameter may now be protected by approved fixed fire protection which previously excluded and permitted only certain types of foam protection because of the problems involving techniques.
8. In general, installation of ungrounded storage tanks, Subsection 4.3.9. has been expanded to provide for installation of tanks in solid rock substrata which will allow the tanks to be installed in a manner which would provide the protection under such soil conditions.
9. Leak testing of the storage tanks and associated piping has been revised to emphasize the use of hydrostatic testing but still allowing pneumatic testing procedures to be used.
10. The use of non-metallic piping systems for underground systems has been made possible subject to approval by the Chief Fire Official.
11. Numerous modifications made to the requirements and new ones have been added to provide improvements and safety in the operations involving storage, handling, and dispensing of flammable and combustible liquids at service stations. These include the following:
  - A. Self service outlets must have shut off devices and be located in the control office so that the shut off is readily accessible to the attendant.
  - B. Longer lengths of hose at marine stations with the approval of the Chief Fire Official.
  - C. Duties outlining the responsibilities of the attendant in regard to the supervision of dispensing units will provide a greater safety margin with the introduction of the new requirements.
12. Where vessels were loading or unloading flammable or combustible liquids, they were required to have supervising personnel upon board during cargo transfer when the vessel is normally operated with a crew on board. The change in this requirement will still permit barge type cargo operations to go on without attendant on board but the operation is to be supervised.
13. Riveted tanks, which I understand are not manufactured any longer, are now prohibited from being relocated.
14. The degree of replacement of contaminated soil following the removal of a leaking underground tank has been made subject to the approval of the Chief Fire Official.
15. Wooden barrels containing potable flammable or combustible liquids may be transported two tiers high without pallets. The change permitting the two tiers is consistent with industry practice which has proven safe over a considerable period of time.
16. Identification for vehicles transporting flammable or combustible liquids will be required to be conspicuously and legibly marked on sides and rear with letters four inches high to identify the product being transported including the name of the carrier.

17. Refuelling of a vehicle on the job site will be permitted providing the vehicle is approved and approval is given by the Chief Fire Official.

**PARTS 3-5 COMMITTEE REPORT**

**General Comments**

The responsibilities of this Committee on Parts 3-5 were on Hazardous Materials, Processes and Operations. The National Fire Code of Canada 1975 and 1977 was used as a base foundation for the proposed Ontario Fire Code.

Committee members made in depth studies on various Articles and tabled these for general discussion at the regular meetings. On the whole there were numerous changes concurred upon and a general rearranging of the various Sections.

**Summary of Significant Changes to Parts 3-5**

1. Requirements were updated and changes for . . .
  - outdoor storage of lumber and wood chips
  - indoor tire and general storage
  - hydrant systems and water supply
  - salvage yards
2. The whole Section on Industrial Ovens for Baking and Drying Process which was in Part 3 was relocated to a new Section in Part 5 which best addresses itself to the subject.
3. Dry Cleaning and Dyeing Plants Section gave way to various modifications necessary for the provision of life and property safety.
4. To avoid duplication such items as electrical installations were changed to conform with the Electric Safety Code, made pursuant to the Power Commission Act.
5. Updating of the various National Standards was made to the many Articles that are referenced in the base codes.
6. Every effort was made to maintain this proposed fire code as a minimum document and no less would be acceptable, as well as the discretionary powers of the enforcement body were limited where possible.
7. The expertise of our Past Chairman proved invaluable in the various fields of plastics and chemicals while the committee studied these matters and made the necessary changes.
8. Changes in technology necessitated recommendations in the areas of . . .
  - dust producing process
  - combustible fibres
  - spray applications
  - flammable and combustible liquids
  - dip tanks
  - reactive substances
  - oxidizing materials
  - organic peroxides
9. Smoking being the cause of loss of life and property was dealt with by the use of standardizing signs.
10. The piping and fittings for acetylene gas, as well as the storage of this gas was looked into by the committee and changes were made in these areas.
11. Welding and cutting operations conducted outside designated shops are now to be provided with a firewatch person.
12. Portable Fire Extinguishers were made to conform to Part 6 of this Code.

## PARTS 2–6–7 COMMITTEE REPORT

### General Comments

The goal of this Subcommittee on Parts 2–6–7 was Fire Safety in Buildings and to recommend that new material be introduced where it was deemed that provisions for life and property safety from fire were not adequate.

The basis of this study was to review and compare the National Fire Code of Canada 1975 edition with existing provincial legislation and the N.F.C. 1977 to eliminate duplication while updating the recommendations and modifications for a proposed Ontario Fire Code.

On the outset it was found to achieve the above goal it was necessary to form several Task Groups who in turn met as often as the main subcommittee to draft their recommendations. In many instances rewriting and adding new articles and paragraphs was not enough and whole Parts had to be inserted into the Code.

### Summary of Significant Changes to Parts 2–6–7

1. Complete new Part on Retrofit, to maintain the quality standard in existing property and buildings in *life safety* and which are not now covered in the Ontario Building Code. Many options are also included so not to impose extra financial burden on the owners and in change of Occupancy and or use of buildings.
2. Complete new Part on Demolition, although the Ontario Building Code had touched on this subject the Task Group studied in detail the matter and tackled the problem for occupied and unoccupied buildings.
3. “Fire Department Access to Buildings” was an entire revision long outstanding over the past years but very necessary for efficient fire fighting performance.
4. Deletion of matter contained in other legislation such as “Helicopter Landing Areas On Roofs”.
5. Addition of new definitions “Check, inspect and test” which now specify the degree of examination that fire protection installations should be given to ensure that they will function correctly, and where required that written records be kept.
6. More definitive requirements have been written into the Part 6 section such as . . .
  - portable fire extinguisher
  - fire alarm and voice communication
  - automatic sprinkler systems
  - hydrants
  - emergency power systems
7. Discretionary powers of the authority having jurisdiction has been limited due to the technical data input of the recommendations.
8. Although life safety was the criterion and was utmost in the minds of the committee while approaching this problem to provide a high level of life safety, property safety results from these provisions.
9. Single station smoke detectors being a new technical advance and not now dealt with for existing buildings was considered at great length and the various options have been recommended.
10. Other problems addressed to in our ever changing world were . . .
  - shopping malls
  - new housing concepts — stack
    - condominiums
    - town
  - vandalism
  - security

X

advanced technology  
uniformity of codes and standards

- 11. Venting to Aid Fire Fighting, Central Alarm and Control Facility were the object of much study.
- 12. Inspections and Tests for Smoke Control Equipment were rounded out related to the Ontario Building Code.
- 13. Numerous recommendations on various subject matters were sent to the Ontario Building Code Branch for appraisal and information on future amendments to the Building Code.

RELATIONSHIP BETWEEN ONTARIO FIRE  
AND ONTARIO BUILDING CODES

When using this Code it is important to appreciate both the special relationship which exists between it and the Ontario Building Code with respect to fire safety and the need to consider the contents of both Codes in building design, construction and maintenance. The role of each Code with respect to fire safety can be summarized as follows:

**Ontario Building Code (OBC)** — establishes the standard of fire safety for the construction of new buildings, the reconstruction of buildings including extensions or alterations, buildings involving a change of occupancy and upgrading of buildings to remove an unacceptable fire hazard.\*

**Ontario Fire Code (OFC)** — establishes the standard for buildings from the day of completion of construction to the day of completion of demolition and establishes standards for fire prevention, fire fighting and life safety in buildings — including but not limited to: retrofitting of existing buildings, standards for the conduct of activities causing fire hazards, maintenance of fire safety equipment and egress facilities, standards for portable extinguishers, limitations on building contents and the establishment of fire safety plans including the organization of supervisory staff for emergency purposes. And establishes the standard for fire prevention, containment and fighting of fires originating outside buildings which may present a hazard to a community.

The two Codes have been developed as complementary and coordinated documents in order to reduce to a minimum the possibility of conflict in their respective contents. In order to ensure their effective application, it is important that fire and building officials be fully conversant with the fire safety standards of both Codes. Such officials should be involved both in the review and approval of plans with respect to fire safety prior to granting a building permit and with inspection of buildings for fire safety purposes. This is the only way to ensure that all known hazards have been considered and that a satisfactory standard of fire safety has been achieved.

---

\*The extent of application of the OBC and the OFC to the upgrading of buildings to remove an unacceptable fire hazard should be based on the judgment of the authority having jurisdiction who must deal with each case on its merits.

SECTION 9.1    GENERAL

SUBSECTION 9.1.1.    APPLICATION OF THE MINIMUM LIFE SAFETY  
PERFORMANCE REQUIREMENTS

9.1.1.1.(1)    In so that an *owner* of an existing *building* will have the widest possible opportunity to select an effective, economical and compatible method to achieve the minimum Life Safety performance, this method of application is intended to define the widest possible options available.

(2)    Under the Ontario Fire Code, the *Chief Fire Official* has a right to inspect and issue orders for the Life Safety performance requirements of any *building*. When these orders include any of the items defined in Section 4, the *owner* must satisfy the order or shall produce a *Life Safety study* indicating how the Life Safety performance requirements may be achieved.

Right to  
Inspect

(3)    When the *building* is to meet any of the minimum Life Safety performance requirements and an *owner* wishes to consider alternative methods to satisfy the order, a *Life Safety study* shall be prepared by a registered architect or professional engineer competent in fire safety designs or a combination of both.

Life Safety  
Study

Where an *owner* has received an order from the *Chief Fire Official* he may make an application to the *Chief Fire Official* within ten (10) working days of the receipt of the order to delay compliance pending completion of a *Life Safety study*. Not less than five (5) working days after receipt of such application the *Chief Fire Official* shall notify the *owner* of the time within which the *Life Safety study* must be received by him. During the period of the study the order shall remain in effect.

(a)    *Life Safety study* means:

- (i)    A detailed assessment of the Life Safety performance requirements clearly identifying those items not meeting the Ontario Building Code requirements.
- (ii)    A detailed description of how the *owner* can achieve equivalent Life Safety performance. For example, where all the “containment” requirements cannot be met, the study shall recommend other requirements to produce an equivalent Life Safety performance.
- (iii)    A detailed time schedule of work to achieve the minimum Life Safety performance.

(4)    The *Chief Fire Official* shall review the *owner’s* Life Safety study for acceptance and shall accept the study or give reasons for non-acceptance within 30 calendar days.

Acceptance

(5)    In the event that the *owner* and the *Chief Fire Official* cannot reach an agreement, the *owner* or *Chief Fire Official* may submit an appeal. Either the order, or sufficiency of compliance of the *Life Safety study* in respect of the order may be appealed to the Fire Code Commission in accordance with Subsection 1.1.6. of the Ontario Fire Code.

Right of  
Appeal

SUBSECTION 9.1.2.    SCOPE

9.1.2.1.(1)    The Ontario Building Code is “a regulation consisting of *building* requirements to minimize the risk of injury and property damage from fire and structural failure.”

- (2) While all *owners* of existing *buildings* should update their *buildings* to meet all the requirements of the latest editions of the Ontario Building Code, it is also recognized that many older *buildings*, because of their type of construction, cannot be economically made to conform to all requirements. There is however, a primary need to ensure that all *buildings* must be maintained at a minimum level of Life Safety.
- (3) The first objective of this section is to develop a method of application which will allow a *building owner* to meet these minimum Life Safety performance requirements in a manner that is effective, economic and compatible with his particular *building*.
- (4) The second objective of this section therefore is to identify those requirements which constitute a minimum level of Life Safety performance for all existing *buildings*.
- (5) The third objective of this section is to list options available to an *owner* to achieve acceptable minimum Life Safety in existing *buildings*. Other options may be permitted on completion of a satisfactory *Life Safety study*.

**SUBSECTION 9.3.6. STRUCTURAL OPTIONS**

**9.3.6.1.(1)** It is not intended that the *Chief Fire Official* will require owners to redesign and reconstruct their existing *buildings* to meet all the revisions or requirements of newer codes. By the fact of its very existence, an older *building* must be acknowledged as displaying its structural adequacy for its designed occupancy.

Limitations

**(2)** The *Chief Fire Official* however shall issue orders or request a Life Safety Study for the Life Safety elements only if an existing *building* has any of the following specific conditions:

Specific Applications

- (a) Where explicit evidence of degradation in any of the principle structural elements which might lead to an unsafe structure.
- (b) Where a change occurs from the original use or occupancy loads for which the original structure was designed.
- (c) Where construction has taken place or is intended to take place which will affect the integrity of the original structure.
- (d) To these specific orders the Owner shall have full recourse to all the provisions set out in Subsection 9.1.1., "Application of the Minimum Life Safety Performance Requirements."

**(3)** While structural adequacy cannot be established by optional Containment, Suppressions, Detection or Egress elements, a Life Safety Study should identify the most suitable structural options to meet all live and dead loads required to achieve structural adequacy.

Options

**SECTION 9.4 RETROFIT REQUIREMENTS FOR ROOMING HOUSES****SUBSECTION 9.4.1. APPLICATION**

**9.4.1.1.** For the purpose of this Section "*Rooming houses*" means a residential occupancy in which lodging is provided for more than four persons and in which bathroom or kitchen facilities are used in common by the occupants of two or more dwelling units.

**SUBSECTION 9.4.2. CONTAINMENT REQUIREMENTS**

**9.4.2.1.(1)** Each habitable room in a basement area shall be separate from any room containing heating equipment by a fire resistant partition containing no openings other than an opening for a door with a door fitted therein and access to each habitable room shall not be gained by passage through a furnace room or a boiler room.

**(2)** Every furnace room and every boiler room in such area shall be vented to provide sufficient combustion air for the heating equipment directly from the outside air.

**SUBSECTION 9.4.3. DETECTION REQUIREMENTS**

**9.4.3.1.(1)** The owner of every rooming house that does not exceed three *storeys* in *building* height and does not contain more than fourteen rooms, of which not more than four such rooms are located within the third *storey* shall

- (a) provide and maintain a manual fire alarm at each common exit or exits from each floor and each manual fire alarm shall be of sufficient size to be heard throughout the rooming house or alternatively shall provide and maintain an electrically connected pull station at each common exit or exits from each floor, and
- (b) provide and maintain in each common hallway or corridor on the ceiling of each *storey* adjacent to the stairways and in the basement or cellar adjacent to the stairways, a product of combustion detector, such detectors to be electrically interconnected so that an alarm in any one detector will sound a similar alarm in all detectors throughout the rooming house. The power supply for the interconnected products of combustion detectors shall be supplied from the main electrical distribution panel in the rooming house. The products of combustion detector shall be equipped with visual indication that it is in operating condition;
- (c) ensure that every manual fire alarm, electrically connected pull station and products of combustion detector in such rooming house is maintained in good repair and satisfactory operating condition and is ready for instant use at all times.

#### SUBSECTION 9.4.4. SUPPRESSION REQUIREMENTS

**9.4.4.1.** Suppression requirements for a rooming house shall be in accordance with Subsection 9.3.5. Egress Options and 9.3.6. Structural Options, of this *Retrofit* Part.

#### SUBSECTION 9.4.5. EGRESS REQUIREMENTS

**9.4.5.1.(1)** In every rooming house which does not exceed three *storeys* in *building* height and does not contain more than fourteen rooms, of which not more than four such rooms are located within the third *storey*,

- (a) all occupants of rooms above the second floor shall have free access to a second interior stairway or exterior fire escape and where approved by the *Chief Fire Official*, access to an exterior flat roof or balcony will be accepted, and
- (b) every inside stairway shall be enclosed by wood stud partitions, covered on both sides by lath and plaster or three eighths inch gypsum board or material of an equivalent fire resistance rating. Existing plaster partitions forming a hallway around such stairways are acceptable as stairway enclosures. All openings providing access to stairway enclosures from rooms shall be protected by solid wood doors.
- (c) Where two or more rooming house rooms or suites are below finished grade, either individual exits or where utilizing a common corridor, 2 means of egress shall be provided.

### SECTION 9.5 P.O.C. DETECTORS IN DWELLING UNITS

The following possible options appear to be available in considering retroactive legislation for the Fire Code:

Option 1: Complete retrofit to the Ontario Building Code;

Option 2: Retrofit to the Ontario Building Code only where income is generated from the rental of such dwelling units;

Option 3: No retrofit provision for any dwelling units.

The options should also consider the installation of listed and labelled detectors. Battery operated or wired in, in accordance with the Building Code or plug in to an A.C. supply should be considered acceptable options in single family dwellings.

Because all of the above is a new matter not contained in any present regulations, public comment with regard to establishing future regulations effecting existing buildings based on the above options is hereby requested.

## MINORITY REPORT

This report is submitted not in opposition to the majority Committee report but rather to set out for further consideration options believed to be relevant in legislating and in the administration of the Ontario Fire Code.

It is believed that an acceptable statement of the goal with respect to preparation, legislation and administration of this code is as follows:

'Public safety and well-being, to society's standards, with respect to fire safety and the public's use, occupancy and association with real property and existing buildings and structures thereon.

Society's standards are deemed to be the laws determined by the legislative body having the power to enact such laws, together with the policies of and monetary and related resources made available by the authority having jurisdiction in relation to the administration and enforcement of these laws.'

It is also believed that in a democratically governed society those elected and having the responsibility for a specific function should have the option of determining how to best carry out this function and how to interface these responsibilities with all other responsibilities that, in varying degrees, may relate thereto.

I therefore believe it inappropriate for the Ontario Fire Code Advisory Committee to recommend that the Fire Services of Ontario be legislated as responsible for the enforcement of this code at the Municipal level. Rather, the legislation should provide that the Council of the Municipality is responsible for the enforcement of the code in the municipality (as was done in the Building Code, Act, 1974) and that the *Council shall appoint* a chief fire official *and* such inspectors as are necessary for the purposes of the enforcement of this code with respect to those matters where the municipality has jurisdiction.

Enforcement of the Ontario Fire Code must also interface with the enforcement of the building code and with the enforcement of property maintenance and occupancy standards bylaws. This enforcement must be done in such a way that the public is not subjected to a myriad of Orders issued in an unco-ordinated manner, perhaps to a degree in conflict and perhaps issued in a sequence that would not permit effective financial and related public response. Indeed, rather than perpetuate 'empires' at the municipal level, it would seem to be much more effective and economically efficient to combine, under one department in the larger centres and in one person in the smaller municipalities, all building code/fire code/property maintenance occupancy standards functions. This combination, particularly in the smaller centres, would permit adequate salary levels to attract potentially competent people who could be trained to be effective in this combined function. In addition there would be enough work to make the function full time, which would not be the case otherwise. At the provincial level there are obvious and compelling reasons (i.e., co-ordination, effectiveness and cost-efficiency) to combine under one Ministry the Building Code Branch/Ontario Fire Marshall/Property Maintenance-Occupancy Standards functions — the Ministry of my preference would be Consumer and Commercial Relations but there may be policy reasons provincially for selecting another Ministry.

I also believe that, if the goal of this code is to be achieved, education of those responsible for its administration and enforcement should be a prime and immediate responsibility of the Ministry responsible for this document, at least to the extent of developing or overseeing the development of adequate course content to educate all those involved at the basic, advanced and teaching/specialist levels. Such courses should then be available throughout the Province at appropriate locations, given by

competent instructors, both technically and as teachers, as well as at the Ontario Fire College. The courses should be open to anyone with priority given to those administering fire safety standards and should allow entry at any one of the three levels depending on expertise as pre-determined through examination. In all probability fire safety courses in relation to building code fire protection requirements would be best combined with those in relation to the Ontario Fire Code, as the knowledge needed by building officials in this area differs little from that needed by fire officials, if each is to be publicly responsive and effective both technically and administratively.

If the fire safety goal as heretofore stated is to be really achieved, the province should additionally undertake to have in place a program for the certification of building officials, fire officials and property standards officers in fire safety matters in respect of the three levels, within five years from the enactment of the Ontario Fire Code. In my view this could be organized at no significant cost provincially or municipally.

I am also dissatisfied with the use in the Report of the word 'equivalent' with respect to the requirements for retrofitting of buildings. While strongly supporting the retrofit concept, to require retrofit with respect to the matters specified to the Ontario Building Code or to the 'equivalent' thereof is, to me, too restrictive. If it can be accommodated in law the retrofit requirements would better be stated as compensatory rather than equivalent, which word permits a more flexible approach more appropriate to existing buildings and their economic viability. I also believe that this Report ought to have recommended the installation of smoke detectors in all existing dwelling units, rather than leave the issue with the definition of three options. There is more potential for life safety, at minimum cost, in such a recommendation than in virtually any other regulatory measure proposed.

Lastly, I would recommend that, as a matter of principle, the Province of Ontario make every effort to keep the Ontario Fire Code identical with the latest edition of the National Fire Code of Canada. Any Ontario additions or changes to the National Fire Code should be identified in readily discernible different type face, with deletions therefrom also identified. A major effort should be made to persuade the Associate Committee on the National Fire Code to accept as much as possible of the Ontario changes as herein recommended. Conversely, where there is no consequential reason for a regulation to be, in Ontario, different from the National Fire Code the latter's regulation should be accepted by Ontario.

## The Environmental Assessment Act, 1975

MGS-22

### THE ENVIRONMENTAL ASSESSMENT ACT, 1975

#### Exemption Section 30

Having received a request from the Ministry of Government Services that the undertakings, namely:

The construction of a students' residence at the Ontario Fire College in Gravenhurst, and

The construction of an activity building at the Quinte Regional Detention Centre in Napanee,

be exempted from the application of the Act pursuant to Section 30; and

Having been advised that if the undertakings are subject to the application of the Act, the following injury, damage or interference with the persons indicated will occur:

The Crown will be interfered with and damaged by any undue delays or costs including those which might arise from a requirement to prepare an environmental assessment for undertakings which are required by the Ministry of Solicitor General and the Ministry of Correctional Services to overcome the current operational difficulties created by inadequacies in the facilities of the two existing institutions.

Having weighed such injury, damage, or interference with the betterment of the people of the whole or any part of Ontario by the protection, conservation and wise management in Ontario of the environment which would result from the undertakings being subject to the application of the Act;

I am of the opinion that it is in the public interest to order and do order subject to the terms and conditions set out below that the undertaking is exempt from the application of the Act for the following reasons:

1. The undertakings will not increase the capacity of the institutions. The projects

serve to update the existing facilities to present standards. All work will be executed within the confines of the sites of the existing institutions,

2. The Minister of Government Services has advised me that services existing at the two sites are adequate to handle the proposed projects, and

3. The undertakings will have no significant adverse effects on the environment.

This exemption is subject to the following terms and conditions:

1. That tenders for construction of the facilities be awarded not later than December 31, 1982, and
2. That the Ministry of Government Services notify the Environmental Approvals Branch, Ministry of the Environment between 30 and 100 days prior to the calling of tenders for the projects advising that the Ministry of Government Services has reviewed the undertakings and is of the opinion that the current conditions under which the projects are proposed are unchanged from conditions that existed on the date that this exemption order was issued.

This order comes into force and has effect on and after the date upon which it is signed.

Dated at Toronto, this 3rd day of January, 1979.

HARRY PARROTT, D.D.S.,  
Minister of the Environment.

O.C. No. 3407/78

### THE ENVIRONMENTAL ASSESSMENT ACT, 1975

#### Exemption Section 30

Having received a request from the Ministry of Government Services that an undertaking, namely:

The reconstruction of the Hills Lake Fish Hatchery located 10 miles southwest of Englehart,

be exempted from the application of the Act pursuant to Section 30; and

Having been advised that if the undertaking is subject to the application of the Act, the following injury, damage or interference with the persons indicated will occur:

1. The Crown will be interfered with and damaged by any undue delays or costs including those which might arise from a requirement to prepare an environmental assessment for an undertaking that is needed by the Ministry of Natural Resources to alleviate the existing operational difficulties caused by the inadequate and obsolete facilities at the Hills Lake Fish Hatchery, and

2. The public will be interfered with and damaged because the level of service available and the efficiency in which it is effected is diminished by the inadequacies of the existing facilities.

Having weighed such injury, damage, or interference with the betterment of the people of the whole or any part of Ontario by the protection, conservation and wise management in Ontario of the environment which would result from the undertaking being subject to the application of the Act;

I am of the opinion that it is in the public interest to order and do order subject to the terms and conditions set out below that the undertaking is exempt from the application of the Act for the following reasons:

1. The Minister of Government Services has advised me that planning studies for Ontario fisheries have indicated a requirement that can only be provided by an increase in production capability at the Hills Lake Hatchery. The proposed project replaces facilities that are inadequate in terms of modern standards and are unable to provide for increases in production,
2. The proposed project only marginally increases the size of the presently existing operation which has been in this same location without incident for the last 40 years,
3. The project will involve improvements to the sanitary waste treatment facilities that will bring the ability of the waste treatment system to handle peak waste loading up to the latest Ministry of the Environment Guidelines for discharges to water courses, and
4. The undertaking will have no significant adverse effect on the environment.

This exemption is subject to the following terms and conditions:

1. That tenders for construction of the facility be awarded not later than December 31, 1982, and
2. ## THE ENVIRONMENTAL ASSESSMENT ACT, 1975

### Exemption Section 30

Having received a request from the Ministry of Government Services that an undertaking, namely:

The construction of a Courthouse on a 9.58 acre site at the southeast corner of Burnhamthorpe Road and Highway 427, in the Borough of Etobicoke,

be exempted from the application of the Act pursuant to Section 30; and

Having been advised that if the undertaking is subject to the application of the Act, the following injury, damage or interference with the persons and property indicated will occur:

1. The Crown and public will be interfered with and damaged by any delays, including those which might arise from a requirement to prepare an environmental assessment for an undertaking which is needed by the Ministry of the Attorney General to assist in reducing the backlog of work presently before the courts.

Having weighed such injury, damage, or interference with the betterment of the people of the whole or any part of Ontario by the protection, conservation and wise management in Ontario of the environment which would result from the undertaking being subject to the application of the Act;

I am of the opinion that it is in the public interest to order and do order subject to the terms and conditions set out below that the undertaking is exempt from the application of the Act for the following reasons:

1. The undertaking is part of the decentralization of the Metropolitan Toronto Crown Attorney's Office approved by Cabinet on April 7, 1976, and is part of the decentralization of Provincial Courts in Metropolitan Toronto approved in principle by Management Board of Cabinet on May 11, 1976,
2. The Minister of Government Services has informed me that adequate municipal services are available for the development of the project and that the proposed development is in keeping with the zoning and with the land use in and adjacent to the site, and
3. The undertaking will have no significant adverse effects on the environment.

This exemption is subject to the following terms and conditions:

1. That tenders for construction of the facility be awarded not later than December 31, 1982, and
2. That the Ministry of Government Services notify the Environmental Approvals Branch, Ministry of the Environment between 30 and 100 days prior to the calling of tenders for the project, advising that the Ministry of Government Services has reviewed the undertaking and is of the opinion that the current conditions under which the project is proposed are unchanged from conditions that existed on the date that this exemption order was issued.

## THE ENVIRONMENTAL ASSESSMENT ACT, 1975

### Exemption Section 30

Having received a request from the Ministry of Government Services that an undertaking, namely:

The construction of the Ministry of Natural Resources' Algonquin Park District Office at the intersection of Hay Creek Road and Scott Street in the Community of Whitney,

be exempted from the application of the Act pursuant to Section 30; and

Having been advised that if the undertaking is subject to the application of the Act, the following injury, damage or interference with the persons and property indicated will occur:

1. The Crown will be interfered with and damaged by any undue delays or costs including those that might arise from a requirement to prepare an environmental assessment for an undertaking that is needed by the Ministry of Natural Resources to overcome the current operational and administrative difficulties which cannot be properly dealt with at the existing inadequate and overcrowded District Office, and
2. The public will be interfered with and damaged because the level of service available and the efficiency in which it is effected is diminished by the inadequacies of the existing facilities.

Having weighed such injury, damage, or interference with the betterment of the people of the whole or any part of Ontario by the protection, conservation and wise management in Ontario of the environment which would result from the undertaking being subject to the application of the Act;

I am of the opinion that it is in the public interest to order and do order subject to the terms and conditions set out below that the undertaking is exempt from the application of the Act for the following reasons:

1. The proposed project replaces facilities which are inadequate in terms of modern standards and will not result in an increase in the size of the presently existing operation,
2. The present District Office building will be converted to act as an information and access control point for Algonquin Park,
3. The Minister of Government Services has assured me that the system for sanitary waste disposal at the proposed development will be designed to conform with the Ministry of the Environment's requirements and guidelines, and
4. The undertaking will have no significant effects on the environment.

This exemption is subject to the following terms and conditions:

1. That tenders for construction of the project be awarded not later than December 31, 1982, and
2. That the Ministry of Government Services notify the Environmental Approvals Branch, Ministry of the Environment between 30 and 100 days prior to the calling of tenders for the project, advising that the Ministry of Government Services has reviewed the undertaking and is of the opinion that the current conditions under which the project is proposed are unchanged from conditions that existed on the date that this exemption order was issued.

Having received a request from the Ministry of Government Services that an undertaking, namely:

The construction program associated with the renovation and alteration of the Swastika Tree Nursery,

be exempted from the application of the Act pursuant to Section 30; and

Having been advised that if the undertaking is subject to the application of the Act the following injury, damage or interference with the persons indicated will occur:

1. The Crown will be interfered with and damaged by the undue expense required to prepare an Environmental Assessment for an undertaking that will have no significant adverse effect on the environment, and that is needed by the Ministry of Natural Resources to alleviate the existing operational difficulties caused by the inadequate and obsolete facilities at the Swastika Tree Nursery, and
2. The public will be interfered with because the level of service available and the efficiency with which it is effected is diminished by the inadequacies of the existing facilities.

Having weighed such injury, damage or interference with the betterment of the people of the whole or part of Ontario by the protection, conservation and wise management in Ontario of the environment which would result from the undertaking being subject to the application of the Act:

I am of the opinion that it is in the public interest to order and do order subject to the terms and conditions set out below that the undertaking is exempt from the application of the Act for the following reasons:

1. The proposed project will involve upgrading facilities at the site of the presently existing operation which has been in this same location without incident for the last 20 years,
2. The project will involve improvements to the sewage system that will bring the system up to the latest Ministry of the Environment standards,
3. The undertaking is needed to allow the Ministry of Natural Resources to carry out its program of developing nursery stock, and
4. The undertaking will have no significant adverse effect on the environment.

This exemption order is subject to the following terms and conditions:

1. That tenders for construction of the facility be awarded not later than December 31, 1982, and

Treasurer's Sale of Lands for Taxes

Each year, municipal and county treasurers compile a list of properties against which taxes are outstanding for at least two successive years, which is a period sufficient to permit sale of the owner's assets to reimburse the municipality. These lists are submitted by the municipal representative to the Ministry of Government Services for publication in THE ONTARIO GAZETTE.

The Gazette is published every Saturday. Tax sale lands are included only in the issue of the first Saturday of each month. Each property is described so that it may be properly identified. Also shown are the amount of tax arrears and costs, and the date, time and place where the sale will be held, which is usually in a public building in the locality. Sales are held three months or later following the date of publication in the Gazette and are subject to a reserve bid equal to the amount of tax arrears and costs.

The previous owner may by law redeem the property any time within one year and one day after the date of tax sale by paying to the municipality all arrears plus costs levied. Where redemption occurs, the municipality reimburses the purchaser of tax sale lands for the amount paid at the sale plus an additional amount to be determined in each case.

If the land is not redeemed in the manner described above, the purchaser at sale, receives from the municipality a tax deed or certificate which should be registered in the appropriate Land Titles or Registry Office. A purchaser should ascertain from either of these offices, information relating to any of the charges or liens against the land and consider the advisability of employing the services of a solicitor to determine the extent, if any, of his liability.

The foregoing applies to tax sale lands which were privately owned. In the event the land is the property of the Crown as represented by the Province of Ontario, only the improvements on the property, such as buildings, may be sold. In this case, an intending purchaser should for his own protection ascertain from the local office of the Ministry of Natural Resources whether or not the land or any part can be purchased or leased from the Ministry. If it cannot, then the purchaser of the improvements would be required to remove them from the land.

In some cases, land advertised for sale in the Gazette may be bought by the municipality, or the owner, prior to sale, may pay the tax arrears and costs. Where this occurs, the land is removed from the tax sale lists.

Written submissions are invited and should be mailed or delivered to the Ontario Highway Transport Board, 10th Floor, 151 Bloor Street West, Toronto, Ontario, M5S 2T5, to arrive at least one week in advance of the meeting chosen by the party submitting the brief. Parties are encouraged to speak to their submissions by attending during the public meetings.

If you wish to address the meetings without filing a written submission, the Board would appreciate being advised of this intention one week in advance of the meeting by written notice or telephone call to the Board at (416) 965-1842.

With the benefit of comments, discussion and advice received during these meetings, the Board hopes to:

- identify the complex factors which affect the supply and demand for dump trucks,
- determine the number of licensed vehicles required to provide an appropriate level of service (in each region),
- establish a policy guideline so that the Board's decision making process is understood by, and equitable to applicants and licences. (N.B. For those who wish to comment on such proposals attached hereto as a schedule are details of draft policy guidelines).

#### SCHEDULE DRAFT

##### POLICY GUIDELINES TO GOVERN CLASS 'R' APPLICATIONS:

For purposes of discussion, this policy statement has been prepared, it deals with:

- applications for Class 'R' authority,
- transfers of Class 'R' operating licences,
- renewals of Class 'R' licences,
- utilization of Class 'R' vehicles once authorized.

Advice and comments are specifically invited on the following policy.

##### POLICY GUIDELINE CLASS 'R' APPLICATIONS:

Pursuant to *The Public Commercial Vehicles Act*, an applicant must demonstrate to the Board that a Class 'R' licence should be granted, "Having regard to public necessity and convenience".

As a result, the Board in considering specific applications for a Class 'R' licence is interested in such matters as:

- What is the current supply of dump vehicles in the area being applied for?
- What is the current demand for dump vehicles?
- What is the nature of the demand?
- Is the application consistent with the demand?
- Is the applicant a fit person to provide the service.

##### APPLICATIONS FOR CLASS 'R' OPERATING LICENCES:

The following outlines some of the specific information that the Board may consider in Class 'R' applications:

- the previous business experience and if applicable the previous operating record of the applicant,
- whether the applicant has the financial resources and ability to perform the service on a viable basis,
- how the applicant intends to maintain vehicles. Ontario law now requires that dump vehicles

be safety inspected by a registered mechanic twice a year,

- the age and type of vehicle (a) for example, single axle, tandem or tractor trailer may be relevant insofar as they are suitable for the particular shipper need and the area need in general,
- whether the applicant has the financial resources to purchase the required vehicles,
- whether the required vehicles are readily available,
- whether the demand will be reasonably continuous over the next construction year at least. This could be done by giving details of volumes, number of trucks hired on a daily average for the shipping season and how long the season is. The following questions could be relevant: Will the applicant be a regular carrier? (back up carriers will not normally constitute need). How much work is guaranteed? Why are additional carriers needed? Will anyone be laid off?
- whether the existing licensed carriers can meet the need. It is pertinent for shipper witnesses to provide details of what licensed carriers have been asked to supply trucks and been unable to supply them; the dates of such requests; the amount of work offered and the rate, and the amount of advance notice given,
- what rates being paid by the shipper(s)? How do these rates compare with other shippers in the area? With M.T.C. rates,
- details of other Class 'R' applications shipper witnesses have supported in the past.

As a matter of overall policy, evidence given in person is encouraged.

##### LATE RENEWALS OF CLASS 'R' LICENCES:

1. Where an applicant for renewal,
  - (i) held a valid licence for the immediate past licensing period; and
  - (ii) has failed to purchase a licence for the current licensing period, making his operating licence invalid,

and applies for interim and permanent authorites on or before the 30th day of September, of the current licensing period, the Board will issue an interim authority in the same or similar terms as the operating licence, and publish the application under *Section 8*, of Regulation 632, pursuant to *The Ontario Highway Transport Board Act*. If no opposition is filed within 15 days of publication, the Board may issue a certificate without a public hearing.

The applications for renewal must be accompanied by an affidavit from the applicant stating:

- (i) that the licence was operated on a continuous basis throughout the previous licensing year, and

- (ii) a reason for the failure to purchase the necessary vehicle licences when required.
- 2. Where under the circumstances outlined above, the applications for renewal are received after September 30th of the current licensing period but before January 1st of the subsequent year, the Board will require:
  - (i) the affidavit required in paragraph 1, and
  - (ii) an affidavit from the shipper or shippers to the effect that the applicant has provided service on a continuous basis in accordance with the terms of its operating licence throughout the previous licensing year.

The Board will issue an interim authority in the same or similar terms as the operating licence, but the permanent application will be set down for a public hearing.

- 3. Where under similar circumstances, applications for renewal are received on or after January 1st of the current licensing period, they will be treated in the same manner as if they involved a new applicant and the usual notice of hearing will be required.

#### TRANSFERS OF CLASS 'R' LICENCES:

- 1. The Board may consider such matters as settlement with creditors and the fitness of the purchaser.
- 2. A split transfer refers to the sale of only a portion of the number of vehicles licensed, e.g. selling a business covering 7 trucks from a total business involving 11 trucks. Split transfers to be prohibited except where the transfer involves family members. Such a case may take the form of an application for new authority, rather than for a transfer.

#### TEMPORARY AND INTERIM APPLICATIONS FOR CLASS 'R' LICENCES:

Temporary and Interim applications must be accompanied by:

- 1. In the case of an interim, an application for permanent authority.
- 2. An affidavit of the shipper setting out the relevant facts which should include where possible:
  - (i) the rate to be paid,
  - (ii) a list of the truckers currently employed, if any,
  - (iii) details regarding licensed truckers who have been offered the work and been unable or unwilling to provide the service. In addition with respect to temporaries, the period for which the service is required and the number of days work guaranteed to the carrier,
  - (iv) other matters as thought to be important by the shipper and applicant.

#### DORMANCY OF CLASS 'R' LICENCES:

- 1. Late Renewals—The present policy of the Board is to review in a hearing on renewal the extent to which the vehicles to be re-authorized have been in use. For example, if a licence authorizing 40 vehicles has not been renewed by July 1st and the holder subsequently applied for renewal and a hearing is held, the Board will consider whether the licensee had been operating all 40 vehicles. If it appears that only 20 vehicles have been utilized, then the reinstated authority could be reduced to 20 vehicles.
- 2. The Board in future may consider applying such a policy to transfers and renewals which do not normally require a hearing.
- 3. The Board upon referral from the Ministry, could review licences where the number of vehicles licensed is less than the number authorized.

#### NEW APPLICANTS FOR CLASS 'R' LICENCES:

As a general rule the Board should consider encouraging new sources of supply of dump trucks rather than allowing an undue concentration of vehicles within large firms.
